Home Product overview How it works Watch Video Anyplace Control is a secure and very easy-to-use remote access software that allows you to manage and control the remote computer, virtually in real time as if it were physically on the front. Home Download the Portable Host Module If you are an IT specialist, you will know how challenging it can be to work with a challenging computer client. Anywhere, Control greatly simplifies this process, by giving a user a link to download a custom host module, which just needs to click on the job, you get all the access you need to provide them with remote support. Fill out the following form to get a link to the custom host module: Attention: To use the custom host module, you must have an online account with us. If you don't have one, create one for free with the admin module (downloadable from here). Customers at home trust us and use any control anywhere in their business Download "Anyplace Control" (Windows Remote Access Software) displays the remote PC desktop on its local screen allowing you to use your mouse and keyboard to control it remotely. It is no longer necessary to spend time getting to the remote location to do the job just because all the vital documents are stored on that computer. All you need is to initiate "any control anywhere" and to perform the things you need. A special "Quick File Transfer" feature allows you to transfer files between computers without any limitations. Our software also has additional features, such as "remote PC restart / shutdown", blocking remote input devices, etc. Anyplace Control includes the remote installation feature, which provides you with the installation to install and configure our on several network computers without the need to visit each PC individually. Free Remote Access Software for Problems Free download ... Installation Our web-based remote access program consists of an administration module (used to access and control other PC's remotely) and module (which starts on a remote PC, the one you want to access). Installation is not required: you can run the portable version of Anyplace Control from our website. But if you prefer the installation (for permanent use), you can also download the installation package. How to Connect to Remote Computer Many network remote control programs (our competitors) face the problem of dynamic or internal IP addresses when it is necessary to connect to remote PC via the Internet. "Anyplace Control" has solved this problem! Our Account Connection service allows you to access a computer remotely via Online Account without any use of IP address. This service (connection mode) differs greatly our product from other simple alternative applications. All users who need access to remote computers located on the local network can use our IP-address connection option. It is also present everywhere Control. An ability to connect to the remote desktop either over the Internet or over LAN makes our remote support software the leader among similar products. Security Anyplace Control is a very secure remote desktop software. Secure security algorithms are used in our remote software. All data transferred during the remote control session or during file transfer is transmitted in encrypted form. No one can decrypt this data in case of data interception. In addition, our remote desktop software uses a double password: an account password to enter a private account and an access password to connect a PC. Using the online account connection you don't have to open additional ports on the firewall, so it doesn't create back doors on your security system. Technical support and support All our users (registered and judged) receive professional support from our support team. A user receives a rapid response. All new customers at the control site of any place are welcome to test the test version of our easy and trouble-free remote support software and to make sure with the great performance of programme. If you have a specialist at the help desk or the network administrator, you know how difficult it is to provide remote support at the request of the puppet user, who does not know how to perform a simple action by himself. Instead of real help, you should explain to a user how to help them help. Sometimes, it is even easier to spend 3 hours driving to the client's workplace than explaining where to download the software, how to install it and make it work (configuring antivirus, router to avoid blocking remote support software), etc. Therefore, and so, the existing tools for remote support should be simpler. Anyplace Control Software, the leader of remote support software, is pleased to announce a knowhow of remote support, primarily the user's part (host module). A new custom host module that does not require any installation and configuration. A true panacea for assistance. The administrator or support service specialist, who needs to perform a remote help to your client can get a custom host module on the website from any control software anywhere. You just need to complete the form all the required parameters (passwords required, account name, etc.). After that, a single link is generated for downloading specially designed host modules. Customers, who need technical assistance should be provided with that link. All you need to perform is just click on the link to start a download and then run a small tool (Custom Host Module). That's all. Instantly (automatically), the client's PC appears in the IT specialist's address book. Thus, the IT specialist can connect to the client's PC, view a remote screen and control it with their own mouse and keyboard. The connection can be established only with a Password, which is known only for the IT specialist. During a remote control session, the client will be able to see all the actions performed on your PC by a remote specialist. After the end of a remote access session, the client can close the host module window and remote remote access Impossible so far, when the customer needs help again. Thanks to this knowhow, all supporters, the specialists in assistance, specialists and network administrators get 50% of their support. What are the benefits of control anywhere? Simplicity for remote user. The remote user doesn't have to install anything on his PC. You don't even have to know your IP address, open ports in a corporate firewall and configure the router. Anyplace Control takes all the cumshots on its own, giving the end user a maximum ease of use of software. The Helpdesk specialist only sends the link to the remote client (by email or Skype) and that's all. Save time. You do not need to be in a long correspondence with a remote user or call it and explain how to configure our software on your PC. Security. Only one person, who had created the link could access the client's PC, as that person is the only one, who knows the account data and passwords. Unlike e-mails with attached programs sent by e-mail, the link would not be blocked by the spam filter. Accessibility. The described solution is provided free of charge. It is possible that it is not a registered user to test it. You don't even have to pay for it. The only condition: you must have an account on the Anyplace Control server. If you do not yet have it, you can download the common management module of any control and create a new account during installation. With any control anywhere, both sides save time, one of the most important treasures of today. There's no time to talk alone to work. Anywhere, control gives you that chance.
